

iGRAIN MANAGER REPORT

CLEAR AND DECISION ORIENTED REPORTING

General description

The iGRAIN MANAGER REPORT is a very efficient management tool. It is printed automatically every Monday morning (or monthly, can be changed in the set-up), and may be sent as e-mail as well. It gives the manager an easy overview of changes in grain condition in every single storage cell:

- Inventory development in the last 2 weeks
- Grain temperature development in the last 2 weeks
- Grain moisture trend, and development in infestation level (CO2 concentration,) if installed
- All grain temperature or grain moisture data at the time of the report
- A smiley with a simple description of the overall grain condition

The report is automatically stored in the system memory and can be viewed at any time.

iGRAIN®
Weekly Report

Bin Name : BIN 12
From 21/06/2017 To 28/06/2017
Week: 26

Inventory status

Week	25	26
Volume	2100	2150
Weight	1899	1970

Detail Historical Information

Temperature Status

Week	25	26
Max	27.50	28.00
Min	19.00	21.00
Avg	20	20

Hot spots

Week	25	26
Count	3	1

CO2 Status (ppm)

Week	25	26
Max	5	3
Min	-10	-10
Avg	-10	-10

Graph Option: Show Legend Show Min Show Avg Show Max Show CO2 Show Humidity

Detail Historical Information

Smiley and text to visualize actual grain condition
